

How many solar panels can be used on the roof

Overview

How many solar panels can fit on a roof?

To calculate how many panels you can fit on your roof, start by determining the total area of your rooftop that's suitable for solar installation. Subtract any areas that are not usable due to obstructions like chimneys, vents, or shaded regions. With the usable space in mind, consider the size of the solar panels you are interested in.

What is a solar panel calculator?

Our solar panel calculator helps you determine how many solar panels can be installed on your roof and how much electricity they can generate. It calculates the maximum number of panels that fit on the available roof surface, taking into account important factors such as orientation, inclination, and panel type.

Can a roof be used for solar panels?

Start by measuring the length and width of your roof to get the overall square footage. However, the entire roof surface may not be suitable for solar panel installation. Obstacles such as chimneys, vents, and skylights reduce the usable area.

How many panels can be installed on a roof?

In this computation, each panel takes up about 1.239-1.44 sq. m of space. Hence, you can set up a maximum of 12 to 15 panels for a 19.72 sq. m of roof space. You need to round your number lower instead of higher if your computations do not result in a whole number.
