

# How many volts should I choose for a solar inverter

## Overview

---

### What size solar inverter do I Need?

An inverter with at least a 20% higher capacity is advisable. Following the previous example, select an inverter rated above 2,880 watts. These calculations set the foundation for determining the size of your battery storage and inverter, ensuring your solar system functions optimally.

### How to choose a solar inverter?

Choose an inverter that has a surge watt rating equal to or greater than this value. As for voltage drop, check the wire length between your solar panels and the batteries. If the wire length is long, you may need to choose a lower voltage system (12V, 24V, or 48V) to minimize voltage drop.

### How many Watts Does a solar inverter use?

Depending on where they fall in that band and the size of their solar array, they will likely use a 3, 5, or 10kW inverter. You also need to consider surge watts and voltage drop. Surge watts are the extra power required to start appliances that have motors, such as refrigerators and air conditioners.

### Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.
