

# How much is the appropriate amount of solar container outdoor power to buy

## Overview

---

How many solar panels does a shed need?

Rounding up, this shed would require nine 300 W solar panels for a total capacity of 2.7 kWp. Once you know a bit about the energy your shed requires, you can start thinking about which solar energy system you'd like to purchase. Here are a few factors to keep in mind when selecting your system:

Does a shed need solar power?

For many homeowners, their shed is valuable storage, a workspace for projects, or even a quiet retreat. Powering these structures with solar energy is becoming an increasingly popular option, but determining the right amount of solar power for a shed can be tricky.

How many kilowatts does a shed need?

For the average shed, it would need around 2.7 kilowatt peak (kWp) direct current (DC). Kilowatt peak, or power DC (kWp), refers to the peak output of the solar power system. If a solar panel has a peak power of 4kWp, the solar panel will produce 4kWp over an hour when working at max capacity.

How much weight can a solar panel add to a shed?

If you're installing the solar panels on your shed's roof, it needs to be able to support the additional weight. For example, if each panel weighs about 50 pounds, a system with nine panels would add approximately 450 pounds to the roof, plus the weight of mounting hardware.
