

# How much power can irf3205 produce as an inverter

## Overview

---

What is irf3205 inverter?

The IRF3205 inverter circuit is commonly used as 12V DC DIY inverters to get 110/230V AC, especially in medium to high-power applications. Inverters are the circuits that convert direct current (DC) from the battery into alternating current (AC).

Who makes irf3205?

IRF3205 is manufactured by International Rectifier (now a part of Infineon Technologies), also prefix in the part number indicates the same. Extremely low on-resistance per silicon area, combined with the fast switching speed and high grade device design that HEXFET power MOSFETs are well known.

What is irf3205 MOSFET?

For high current switching applications, the IRF3205 MOSFET stands as a most popular and formidable player. As we know that high-powered devices plays an important role in various applications, from power amplifiers to motor control, so understanding its features, characteristics and capabilities is essential.

Where to use irf3205?

IRF3205 can be used in many applications which require high speed load switching like in UPS, Battery Backup systems etc. Other than that it can also be used in many different types of power supply applications. It can also be used to control high current loads with embedded systems.
