How to check the local base station site

Overview

How to find a base station?

Base station location in urban areas is best determined by doing round trips of city blocks. At more rural locations you should do larger sweeps to save time. You will get the best result on flat ground. Ensure that you have a sufficiently good connection to the base station as well as a GPS connection.

How can I see the location of a mapped base station?

The map opens from left side main menu. In the maps tab you can see the location of already mapped base stations. The application will automatically only show the base stations of the current network being used (LTE in the picture). The location of base stations can also be viewed from the Cellmapper webmap.

How do you set up a base station?

If you can understand these concepts, you can start working with your base station. Base stations are generally set on tripods to ensure a stable platform. They are then placed over either a known of unknown point. With the use of a tribrach, you can accurately place the unit over a target on the ground while keeping the antenna level.

How do base stations work?

Base stations are generally set on tripods to ensure a stable platform. They are then placed over either a known of unknown point. With the use of a tribrach, you can accurately place the unit over a target on the ground while keeping the antenna level. The Hemisphere S631 is pictured here.
