

# How to communicate with base station inverter in Naypyidaw

## Overview

---

What are the characteristics of different communication methods of inverters?

The characteristics of different communication methods of inverters are obvious, and the application scenarios are different. In order to better weave the underlying network of energy digitization and intelligent development, choose the most appropriate communication method according to local conditions.

How to connect a battery to an inverter?

**Power Cables:** Use appropriately sized power cables to connect the battery to the inverter. The cable size should be chosen based on the current rating of the system to minimize power loss and avoid overheating. **Communication Cables:** For communication, use the cables specified by the manufacturers.

What data points can an external controller read from nuvation BMS?

An external controller typically polls Nuvation BMS battery control points at a rate of 2-4Hz. This controller reads data points required to manage current flow in the system. The following table summarizes the most important points an external controller may want to read from Nuvation BMS. Table 3. MESA Points Read by an External Controller
