

# Indian Industrial Power Storage

## Overview

---

What is the energy storage landscape in India?

Current energy storage landscape in India India's energy storage sector is still emerging, but growth and planning are rapid. Today, pumped hydro storage provides most bulk storage (existing projects total only a few gigawatts and hundreds of megawatt-hours), while grid-scale batteries are just beginning to roll out.

How will energy storage Impact India?

The impact is already visible, today nearly half of India's generation capacity is non-fossil. Renewables alone accounted for about 46% of total installed capacity by late 2024. Energy storage will be key to maintaining and growing this share of clean energy as India expands its solar and wind fleets. Current energy storage landscape in India.

How big is India's energy storage capacity?

This represents substantial growth from India's current energy storage capacity of approximately 6 GW (mostly pumped hydro), underscoring the need for robust policy and regulatory support to accelerate storage deployment at this scale.

How will India's energy storage sector grow in 2024?

Renewables alone accounted for about 46% of total installed capacity by late 2024. Energy storage will be key to maintaining and growing this share of clean energy as India expands its solar and wind fleets. Current energy storage landscape in India India's energy storage sector is still emerging, but growth and planning are rapid.
