## Overview

---

How big will electrochemical energy storage be by 2027?

Based on CNESA's projections, the global installed capacity of electrochemical energy storage will reach 1138.9GWh by 2027, with a CAGR of 61% between 2021 and 2027, which is twice as high as that of the energy storage industry as a whole (Figure 3).

How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).

What is electrochemical energy storage?

The contemporary global energy landscape is characterized by a growing demand for efficient and sustainable energy storage solutions. Electrochemical energy storage technologies have emerged as pivotal players in addressing this demand, offering versatile and environmentally friendly means to store and harness electrical energy.

What is electrochemical energy storage (EES) technology?

1. Introduction Currently, carbon reduction has become a global consensus among humankind. Electrochemical energy storage (EES) technology, as a new and clean energy technology that enhances the capacity of power systems to absorb electricity, has become a key area of focus for various countries.
