

# Is it cost-effective to install a solar inverter

## Overview

---

How much does a solar inverter cost?

The inverter is a crucial part of your solar investment, whether you're on the grid or building an off-grid solar system. It connects your solar photovoltaic panels to your home and the grid, determining whether your energy is usable, storable, or wasted. Expect to pay \$1,000 to \$3,500, depending on type, size, and features.

Which solar inverter is best?

String inverters are the most affordable. Hybrid inverters cost more because they handle more functionality. Microinverters, one for each panel, have the highest cost per watt due to their quantity. 2. System Size Larger solar panel systems require higher-capacity inverters.

Do solar inverters need to be replaced?

Odds are that sooner or later your inverter will need to be replaced. If you lease your installation or finance it through a power purchase agreement (PPA), just call up your solar installer and they'll come out and replace the inverter at no cost to you (since technically they own the installation).

How do I choose a solar inverter?

Stick with a string inverter. Lower overall cost, fewer moving parts. Match the inverter to the system size, don't overspend. Choose one with at least a 10-year warranty. Ask your solar installer to quote two or three options. If you might expand your system, size the inverter accordingly.
