Overview

What are single glass solar panels?

Single glass solar panels, also known as monofacial solar panels, are the startup of steps in renewable solar energy. They are called single glass because the solar cells are packed behind the single glass technology. The reason they are called monofacial is that 'mono' means single or one and 'facial' means face.

Why do solar panels use single glass?

These solar panels use single glass for their protection which can be harmed by severe and bad weather conditions leading to the decrease in efficiency and performance of solar panels. Single glass panels have an aluminium frame around them which loses its beauty when exposed to bad weather for a long time.

Should you buy single glass or double glass solar panels?

If you are concerned about your budget and want to buy solar panels, then single glass panels are the best option for you. But if you are looking only for performance and efficiency and much worried about your budget, then double glass panels are waiting for you.

Why are single glass solar panels called monofacial?

They are called single glass because the solar cells are packed behind the single glass technology. The reason they are called monofacial is that 'mono' means single or one and 'facial' means face. So monofacial means a solar panel with single face or single glass.
