

# Is there any wind power station in Paris

## Overview

---

How is wind energy generated in France?

Wind energy is generated from the conversion of kinetic energy from wind turbines into electricity. Wind power was one of the leading electricity sources in France, with over 50 terawatt-hours generated in 2023, placing France among the most important wind power producers in the European Union.

How many wind power plants are there in France?

France generates wind-powered energy from 699 wind power plants across the country. In total, these wind power plants has a capacity of 8824.0 MW. How many wind power plants are there?

There are currently 5,278 utility-scale (commercial, greater than 1 MW) wind power plants in the world. With a total of 350,000+ wind turbines globally.

Is France a leader in wind energy?

Wind energy is rapidly becoming one of the most vital components of France's renewable energy landscape. With its favorable wind conditions, extensive coastline, and strong governmental support, France is positioning itself as a leader in wind energy generation in Europe.

Why is France a good place to invest in wind energy?

French companies' recognised expertise in both onshore and offshore wind is central to France's appeal. The wind energy industry is experiencing steady growth, driven by regular investments and continuous innovation. By the end of 2023, 23.8 GW of wind capacity were installed in France.
