

# Is there solar power generation in Austria's glass village

## Overview

---

Does Austria have a renewable power plant?

Taking wind, biomass and solar into account, renewable power generation rises to more than three-quarters of the country's total electricity production. Austria's last coal-fired power plant closed back in 2020.

Could Austria benefit from boosting wind and solar power?

To ramp up low-carbon electricity generation, Austria could significantly benefit from bolstering its wind and solar power sectors. Both are already integral to the country's electricity mix, providing considerable contributions to its green energy landscape.

What challenges will Austria's electricity sector face?

The huge expansion in renewable generation over the next few years will pose the next major challenge for Austria's electricity sector – the system will become more decentralised, with numerous small generating facilities such as rooftop photovoltaic arrays connected to the grid.

Does Austria need 100% renewable electricity?

Targeting 100% renewable electricity Austria has set itself the target of meeting 100% of its annual electricity needs from renewable energy sources by 2030. To achieve this, an additional 27 terawatt hours (TWh) of power will have to be generated from renewables.

## Is there solar power generation in Austria's glass village
