

# **Kathmandu Communication 5g base station frequency**

## Overview

---

What are the 5G frequency bands in Nepal?

As Nepal Prepares for the 5G network, the committee recommends the 5G Frequency bands in three different segments, namely low band, mid band, and high band. For the low spectrum 5G bands, they have chosen 900 MHz, 1800 MHz, 2300 MHz, and 2600 MHz. The frequency bandwidth to assign in low bands are 10 to 20 MHz.

What spectrum does Nepal use for 5G?

Nepal has not used any of these spectrums for the existing mobile networks. Among them, 3600 MHz is the most widely used 5G frequency band in the world. The frequency bandwidth to allocate in this band shoots up to 100 MHz. Similarly, for the high band, they decided to use the 26 GHz spectrum to use for 5G.

How many 5G operators are there in Nepal?

By February 2022, there were 427 operators in 137 countries/regions with 5G (GSA). People here have also started to demand 5G service here in Nepal. With the initiation of such demand, we are going to discuss everything about 5G network in Nepal now after Ntc, one of the operators has already started the trial.

What frequency band is used in Nepal?

The frequency bandwidth to assign in low bands are 10 to 20 MHz. Among these bands, 900 MHz, 1800 MHz, and 2300 MHz are already in use whereas the 2600 MHz band is completely new for Nepal. For the Mid bands, they have selected 3300 MHz, 3600MHz, and 4700 MHz.

## Kathmandu Communication 5g base station frequency

5G Network in Nepal , Features, Trial, Spectrum, Availability ...

Because 5G Is Faster It Is Far More Efficient It Inspires A Whole New Suite of Services New Use Cases Demand 5G in Nepal 5G Is Expensive 5G Is Not Mobile Broadband only 5G Spectrum Not Allocated in Nepal Are We at A 5G Demanding State? The 5G Network Is Evolving Are The Telcos Working on 5G in Nepal? As 5G provides higher data speed with the same operational power in the base station, 5G is considered more efficient in terms of power. Similarly, it is also efficient in maintaining higher internet speed for subscribers due to the use of multiple antennas with a term called spectrum efficiency.
