

# **Lifespan of portable power bank**

## Overview

---

How long does a power bank last?

The frequency at which you charge and use a power bank will dictate how quickly a cycle is consumed, and with each consumed cycle, the power bank's performance degrades. On an average basis, a high-grade power bank has a lifespan of 4 to 5 years and can retain a charge for 4-6 months without substantial power loss.

How long does a power bank Charger last?

10,000 mAh Power Bank: This capacity often lasts longer and can typically support 2-3 years of moderate use. 20,000 mAh Power Bank: High-capacity power banks may support even longer use, often 3-4 years with average use due to fewer complete discharges per cycle. Several factors influence how long a power bank charger lasts.

Does using a power bank shorten the life of a battery?

If you're someone who uses your power bank daily to charge multiple devices, the battery will naturally go through charge cycles faster, shortening its lifespan. On the other hand, using it infrequently and leaving it idle for long periods can also degrade the battery over time.

How long does a power bank take to charge?

Typically, a power bank takes about 3 to 6 hours to fully charge, depending on the model and the charging source used (wall outlet, computer, etc.). Can I use my portable charger internationally?

Yes, most portable chargers are designed for international use.
