

Luxembourg distribution room UPS uninterruptible power supply production site

Overview

What is uninterruptible power supply (UPS)?

For instance, when designing server rooms, they require uninterruptible power supply (UPS) systems that deliver complete power protection for critical IT applications. These components must also be able to accommodate growth and expansion while maintaining cost-effective performance.

Does your ups system work if your primary supply goes down?

Our UPS systems integrate seamlessly into data centers to deliver consistent, efficient power, even if your primary supply goes down. As technology advances, so does the demand for uninterrupted power. While there have been great advancements in the power grid, there are still vulnerabilities that allow for outages and fluctuations in flow.

What is a server room UPS system?

In most cases server room UPS systems will be of the online double conversion type, although line-interactive UPS can also be used in certain rackmount applications. As computing requirements grow, so will a server room's power requirements.

How to choose an ups room?

First and foremost, you need to consider UPS room location. You need to think about where the power supply is for your business, and where the various devices and electronics that will need to be powered are. UPS systems are vital for protection, but they also require safeguarding to prevent potential hazards.
