

Luxembourg solar folding container refrigerator wholesale

Overview

What is a solarfold photovoltaic container?

The Solarfold photovoltaic container can be used anywhere and is characterized by its flexible and lightweight substructure. The semi-automatic electric drive brings the mobile photovoltaic system over a length of almost 130 meters quickly and without effort into operation in a very short time.

What is a solar refrigerated container?

The solar refrigerated containers have outer walls made of steel and an internal special thermal insulation system (insulation with double coating in a food-safe surface) for an extra low heat transfer coefficient. Due to their shape, the containers can easily be transported by ship or helicopter and can therefore be placed flexibly.

How does solarfold work?

With Solarfold, you produce energy where it is needed and where it pays off. The innovative and mobile solar container contains 200 photovoltaic modules with a maximum nominal output of 134 kWp and, thanks to the lightweight and environmentally friendly aluminum rail system, enables rapid and mobile operation.

What are solar-powered refrigerated containers used for?

Our solar-powered refrigerated containers are ideal as self-sufficient solutions for medicine, perishable goods or technical equipment. Our systems are in use 24/7 and have been developed especially for operation at high ambient temperatures of up to 52°C. All applications are supplied exclusively with photovoltaic and wind generators.
