

Maintenance process of lithium-ion batteries for solar container communication stations

Overview

How should a lithium ion battery be charged before storage?

Before storage, lithium-ion batteries should be charged to the recommended state of charge (SoC) using a reliable battery management system or intelligent charger. Disconnecting the battery from the charger after reaching the desired SoC is essential to prevent overcharging.

How do you store lithium ion batteries?

Place only discharged batteries in a battery collection container. Use electrical tape or other approved covering over the battery connection points to prevent short circuits. Lithium-Ion rechargeable batteries require routine maintenance and care in their use and handling.

How long can a lithium ion battery be left unused?

Read and follow the guidelines in this document to safely use Lithium-Ion batteries and achieve the maximum battery life span Do not leave batteries unused for extended periods of time, either in the product or in storage. When a battery has been unused for 6 months, check the charge status and charge or dispose of the battery as appropriate.

Can lithium-ion batteries be used for energy storage?

Novelty relies on IoT, mid-scale LiB, alerts, real conditions and interoperability. Long-term (two years) experimental results prove the suitability of the proposal. Energy storage through Lithium-ion Batteries (LiBs) is acquiring growing presence both in commercially available equipment and research activities.
