

Maximum inverter for off-grid energy storage

Overview

What can off-grid inverters be used for?

Off-grid inverters can be used to build stand-alone power systems. They supply pure sign-wave AC power and can be used to build stand-alone power systems that can be either AC-coupled with solar inverters or DC-coupled with MPPT solar charge controllers.

How much power can an off-grid inverter handle?

An off-grid inverter with power-frequency isolation technology can handle peak power that is 3 times the rated power. For instance, a 3kW high frequency off-grid inverter can handle a set of 1P air conditioner, which requires about 5.5kVA to start.

What is the output power of an off grid inverter?

The rated power output of an off-grid inverter is decided by the load. However, the start power of motor of some inductive-load devices like air conditioner or water pump is 3-5 times of the rated power. Thus, the off-grid inverter has special requirements on the overload situation.

What is the peak power of an off grid inverter?

The peak power capacity of an off-grid inverter that adopts high-frequency insulation technology is twice the rated power. Some inductive-load devices like air conditioners or water pumps have a start power that is 3-5 times their rated power, so the off-grid inverter has special requirements for overload situations.
