## Overview

---

How can wind energy be stored?

Since wind conditions are not constant, wind energy can be stored by combining wind turbines with energy storage systems. These hybrid power plants allow for the efficient storage of excess wind power for later use.

Can wind turbines be used to store energy?

Wind turbines can be directly coupled with energy storage systems, efficiently storing excess wind power for later use. Without advancements in energy storage, the full potential of wind energy cannot be realized, limiting its role in future energy supply.

How can wind energy and storage be integrated?

Wind energy and storage can be integrated through projects like the “Wind+Storage Combination” in Uckermark, which demonstrates this synergy through innovation tenders. Research focuses on developing efficient, cost-effective storage technologies to store excess wind power and release it when needed.

How should I choose a wind turbine storage system?

When choosing a wind turbine storage system, it is generally recommended to match the storage system size with the wind turbine’s capacity. A common recommendation is to use two-hour systems, referring to the time required to fully discharge the stored energy at the system’s rated power.
