

Mongolia Power Station Generator

Overview

When did Mongolia get a new 210 MW power plant?

The foundation for a new 210 MW addition began on June 14, 2012, but it was never completed. In accordance with an intergovernmental agreement between Mongolia and the Russian Federation, four turbo-generators at Ulaanbaatar-4 power station were upgraded and connected to the Central Energy System for a total of US\$93 million.

What is Ulaanbaatar 4 power station?

a Global Energy Monitor project. Ulaanbaatar-4 power station is an operating power station of at least 789-megawatts (MW) in Ulaanbaatar, Bayangol, Mongolia with multiple units, some of which are not currently operating. It is also known as ДЦС-4, Ulaanbaatar-4 Thermal Power Plant, Power Plant Four, Ulaanbaatar Thermal Power Plant No. 4.

How much power does Ulaanbaatar have?

The first six units of the power station have capacities of 80 to 110 MW each, and were built between 1981 and 1989. The units supply 70 percent of the power and 60 percent of the heat for Ulaanbaatar. Germany's KfW funded the refurbishment of four of the power station's six Russian-made turbines.

Why did Mongolians protest in Sukhbaatar?

On January 10, 2019, more than 20,000 Mongolians stood in bone-chilling cold to rail against their government in Sukhbaatar square in the center of the capital. They protested against the horrendous air quality in Ulaanbaatar, since citizens are forced to burn coal for heat in villages.
