

Monocrystalline silicon solar module price statistics

Overview

What is the global monocrystalline solar cell market?

The global monocrystalline solar cell market was valued at USD 26.6 billion in 2023 and is estimated to grow at a CAGR of 2.9% from 2024 to 2032. It is a type of photovoltaic cell made from a single, continuous crystal structure of silicon. These cells are created using a process that involves slicing wafers from a pure, high-grade silicon ingot.

How much does a monocrystalline solar module cost?

The average price of monocrystalline solar modules is currently around \$0.278 per watt (with prices ranging from \$0.265 to \$0.455 per watt), while the equivalent monocrystalline prices have fallen to an average of \$0.25 cents per watt.

How efficient are monocrystalline solar panels?

Monocrystalline panel efficiencies can range from 17% to 20%. Because monocrystalline solar cells are made out of a single crystal of silicon, electrons can flow easier through the cell, which makes the PV cell efficiency higher than other types of solar panels.

What are monocrystalline solar cells?

Monocrystalline solar cells are among the three types of materials that exhibit photovoltaic properties. The other two are polycrystalline solar cells and amorphous or thin-film solar panels. Monocrystalline solar cells' characteristics are as follows:
