What is a monocrystalline solar panel?

A monocrystalline panel is a flat black single solar panel. You can easily identify them by their corner-cut, square-shaped silicon wafers. As the name suggests, these solar panels are built with a single silicon crystal. This crystal is brought into this shape via several steps.

Why is monocrystalline silicon used in solar panels?

Monocrystalline silicon is used to manufacture high-performance photovoltaic panels. The quality requirements for monocrystalline solar panels are not very demanding. In this type of boards the demands on structural imperfections are less high compared to microelectronics applications. For this reason, lower quality silicon is used.

Are monocrystalline solar panels better than other solar panels?

Their efficiency usually ranges between 17% and 22%. Higher efficiency indicates that monocrystalline solar panels would take less space than other solar panels to produce the same energy. Hence, monocrystalline panels should be your first choice if you are looking for residential solar panels.
