

Nauru UPS uninterruptible power supply model

Overview

What is an uninterruptible power system (UPS)?

Uninterruptible power system (UPS) (1) An electrical system designed to provide instant, transient-free backup power during power failure or fault. Some UPSs also filter and/or regulate utility power (line conditioning). (2) A Device whose sole purpose is to save your equipment, your data and your job. User replaceable.

Are battery-backed uninterruptible power supplies reliable?

Reliability of power sources is an increasing challenge in many sectors and battery-backed uninterruptible power supplies (UPS) are one option to protect and keep electronic equipment operating in the event of grid power failure.

What is the difference between a ups and an auxillary generator?

A UPS provides backup power and actively conditions and regulates voltage. Similarly, an auxillary generator provides backup power, but typically takes 10-15 seconds to start up, depending on its type.

Is a ups a primary surge protection device?

A UPS delivers second-level protection against surges; it should never be considered a primary surge protection device. It also continually regulates incoming voltage and provides an internal battery that allows connected equipment to continue running even if the power supply is cut.
