

# North Korea solar irrigation water pump

## Overview

---

What is a solar-powered pumping irrigation system?

A solar-powered pumping irrigation system utilizes solar photovoltaic (PV) technology to convert solar energy into electrical power, which drives pumps for water lifting and irrigation. This system does not rely on fossil fuels and avoids environmental pollution.

What is solar-powered pumping technology?

Solar-powered pumping technology harnesses solar energy through PV cell panels, converting solar radiation into electrical energy, which is then utilized to power water pumps and supply water for agricultural irrigation or human and livestock consumption.

What is solar water pumping system?

Among all renewable energy sources, Solar energy is the best source of free, available, and clean energy for the environment. Water pumping in developing countries is generally dependent on conventional electricity or diesel generated electricity. Solar water pumping system is to reduce the usage of diesel fuel or coal-based electricity.

How solar PV technology is applied to water pumping systems?

Solar PV technology applied to water pumping systems is based on the conversion of solar energy into electrical energy by solar panels to power a water pump. PV panels are connected to a Direct Current (DC) or Alternating Current (AC) motor that Sprinkler connected with D.C water pump is used for irrigation purpose.
