

# Outdoor solar glass

## Overview

---

What is photovoltaic smart glass?

Photovoltaic glass, also known as solar glass or transparent solar panels, is a type of smart glass that uses embedded photovoltaic cells to convert sunlight into electricity to generate electricity.

What is Photovoltaic Glass?

Unlike traditional solar panels that absorb visible light, photovoltaic glass converts primarily ultraviolet (UV) and infrared light into electricity, making it suitable for windows, facades and other transparent surfaces of buildings, vehicles and equipment.

What is a solar window?

In other words, a solar window is a form of building-integrated photovoltaic (BIPV) technology where the window is both a structural element and a source of solar power. Every pane of glass can be upgraded with transparent PV, turning towers into vertical solar farms.

Are solar windows a good idea for commercial buildings?

By 2025, they scaled up to large 5-foot panels in their pilot production. These windows look almost like regular low-e glass, yet produce power. The Patagonia project demonstrated real-world performance and is inspiring more commercial buildings to consider solar window retrofits.
