

Peak shaving energy storage solution

Overview

Can peak shaving reduce energy costs?

Modern consumers actively seek cost-effective energy solutions and sustainable practices. This white paper explores peak shaving as an effective method to minimize energy costs. Energy and facility managers will gain valuable insights into how peak shaving applications can help unlock the full potential of energy storage systems.

How does peak shaving work?

Peak shaving can be accomplished by activating on-site power generation systems, such as diesel generators, or utilizing a battery energy storage system. During peak shaving, the consumer's overall electricity consumption remains consistent, but a portion of their demand is met through the BESS instead of drawing power from the grid.
