Overview

What is battery management system (BMS)?

Battery Management System (BMS) is the “intelligent manager” of modern battery packs, widely used in fields such as electric vehicles, energy storage stations, and consumer electronics.

What functionalities can be found in a battery management system (BMU)?

Some other functionalities that can be in the BMU are interlock functionality or the real time clock and vector management system for the software. BMS Software Architecture: The battery management system architecture has different layers that abstract different parts of hardware.

What is a multi-master battery management unit (BMS)?

NX-Tech’s BMS offers a parallel pack control which provides an advantage for scalable, modular battery architectures suitable for: A multi-master BMS allows multiple Battery Management Units (BMUs) to coordinate as peers within a battery system.

What is a BMS master controller?

Data is sent to a BMS Master Controller, which aggregates and analyzes the information. Battery Management Unit (BMU): The Battery Management Unit (BMU) is a key component in a Battery Management System (BMS) responsible for monitoring and measuring critical parameters of the entire battery pack or its individual cells.
