

# **Power distribution ups uninterruptible power supply**

## Overview

---

What is an uninterruptible power system (UPS)?

Uninterruptible power system (UPS) (1) An electrical system designed to provide instant, transient- free backup power during power failure or fault. Some UPSs also filter and/or regulate utility power (line conditioning). (2) A Device whose sole purpose is to save your equipment, your data and your job. User replaceable.

What is a UPS system?

An Uninterruptible Power Supply (UPS) is a power protection device equipped with an energy storage unit, primarily utilizing an inverter to ensure regulated and uninterrupted power output.

What is a power distribution unit (PDU) & uninterruptible power supply (UPS)?

Power distribution units (PDUs) distribute power and protect IT loads running normally. Conversely, uninterruptible power supplies (UPSs) ensure there is enough power, at least for a short time, to run your equipment until you can find another available power supply (i.e., a backup generator).

What is an uninterruptible power supply?

It ensures that devices such as computers, servers, and telecommunication systems continue operating even when the main power supply is interrupted. The uninterruptible power supply definition includes not only power backup but also protection against voltage spikes, surges, and fluctuations. Power from the grid is not always stable.
