

Retrofit 1500W solar

Overview

Should you retrofit a solar energy system?

Let's say you've owned a solar energy system for several years, and over time, your energy needs have expanded. Whether you need more power to charge a new electric vehicle or because of increased home consumption (maybe you invested in a new heat pump), there are many reasons why people may want to retrofit an existing solar energy system.

What is a retrofit & how does it work?

Retrofitting is the industry term for upgrading or expanding an existing system, and it can mean adding new panels and Power Optimizers or even a new inverter to reach higher levels of energy generation.

Do SolarEdge inverters oversize?

For example, SolarEdge inverters generally come with 200% oversizing, so you can add panels up to that range beyond the inverter rating. If you have a solar system that does not support oversizing, you will have fewer panels installed, which means less power generation throughout the day.

What makes a good solar inverter?

A good inverter, like the ones from SolarEdge, will be built with an oversizing capability that allows you to add panels over and above the stated rating because the system's peak energy output is only achieved for part of the day.
