

Return on Energy Storage Power Station

Overview

How many electrochemical storage stations are there in 2022?

In 2022, 194 electrochemical storage stations were put into operation, with a total stored energy of 7.9GWh. These accounted for 60.2% of the total energy stored by stations in operation, a year-on-year increase of 176% (Figure 4).

Are independent energy storage stations a good investment?

This does not augur well for the market in terms of long-term competition. There will be safety risks associated with excessive cost control and an indifference to quality. Independent energy storage stations enjoy good long-term prospects, though this segment is sluggish in the short term.

How do energy storage devices affect power balance and grid reliability?

It is crucial to integrate energy storage devices within wind power and photovoltaic (PV) stations to effectively manage the impact of large-scale renewable energy generation on power balance and grid reliability. However, existing studies have not modelled the complex coupling between different types of power sources within a station.

How long does energy storage last?

In addition, considering the life loss can optimize the charging and discharging strategy of the energy storage, which extends the actual lifetime of the energy storage device from 4.93 to 7.79 years, and increases the profit of the station by 2.4%.
