

San Diego Mobile Energy Storage Container Fast Charging

Overview

What is UC San Diego's energy storage system?

The 2.5 MW, 5 MWh energy storage system is the latest addition to UC San Diego's portfolio of energy storage devices - one of the most diverse energy storage portfolios of any university in the world. Other devices currently in place include the following with additional energy storage projects being planned as well:.

How important is energy storage in California?

Energy storage is considered so important that the California Public Utilities Commission (CPUC) decided last year to establish an unprecedented energy storage target: 1.3 gigawatts (GW) of energy storage is to be procured and installed by three of the state's investor-owned utilities by 2024.

What is CCS DC fast charging?

CCS DC Fast Charging - Featuring dual 150kW CCS chargers, suitable for high-speed public and commercial EV charging. Sustainable Innovation: Utilises second-life EV battery packs, extending their lifespan by up to 25 years while reducing carbon footprint and costs.

What are energy storage systems?

Energy storage systems are technologies that convert electricity into another form of stored energy and then convert the energy back to electricity at another time. Energy storage helps integrate intermittent renewable resources, such as solar power, and provides power when it is needed for consumption.
