

# Self-built house solar panel roof integrated

## Overview

---

What are integrated solar panels?

Integrated solar panels, also called in-roof solar panels or built-in solar panels, are designed to be installed as part of your home's roof. They replace a section of roofing material rather than being mounted on top of the existing roof.

How do roof-integrated solar panels work?

Technically, roof-integrated solar panels function just like traditional solar panels or solar roof tiles, using photovoltaic cells to convert sunlight into electricity. However, instead of sitting on top of the roof on visible brackets that can affect your home's aesthetic appeal, they become a part of the roof structure itself.

What is a building-integrated photovoltaic (BIPV)?

The main difference separating building-integrated photovoltaics from traditional solar panels can be easily summed up. Whereas solar panels are attached to the home (most often rooftops), BIPVs are built into the house's vital exterior elements.

What are in-roof solar panels?

In-roof solar panels, also known as integrated solar panels, are solar panels that are installed directly into the roof structure instead of being mounted on top. They replace the roofing material itself and sit flush with the roofline, providing a seamless aesthetic that traditional solar panels do not. Are in-roof solar panels as efficient?
