

# **Single-phase photovoltaic container used in the Palestinian mountains**

## Overview

---

Does Palestine have a potential for PV power generation?

The System Advisor Model software (SAM) was used to predict the power potentials for a year. The results indicate that Palestine has a significant potential for PV power generation within 1,700 kWh/kWp.

What re technology is used in Palestine?

Solar water heating systems are by far the most prevalent RE technology in Palestine. About 70 % of Palestinian families use solar water heaters due to the high expenses and the impact of Israel's implementation of solar water heating in homes. Additionally, WB and GS are home to 15 solar water heating facilities.

How is the electricity system in Palestine different from other countries?

And upgrade of the electricity grid to enable distribution of renewable energy, by 2030 . The electrical energy system in Palestine state is different from any other country, because Palestine imports its energy from three different sources; from Israel (85 %), Jordan (2 %) and Egypt (3 %).

Does Palestine use solar water heaters?

Even though solar water heaters are widely used in Palestine, solar thermal energy only accounts for 8 % of the country's total energy consumption . In WB, 63.1 % of houses had solar water heaters in 2019, while the GS figure was 43.8 % and produced more than 600 GWh .
