

Solar 3v DC water pump

Overview

What is a 3 hp solar water pump?

On grid 3 HP solar water pump is a grid tied water pumping system. In this system, the solar pump can be powered by direct solar energy as well as the government grid. If the solar panels generate more energy than the 3 HP solar pump's consumption, the excess power is exported to the grid via net metering.

How to design a solar photovoltaic powered DC Water Pump?

The simplest type of PV system one could ever design is by connecting single or multiple PV modules directly to the DC load as shown in figure 1 below. The overall capacity of the modules is such that it can supply power only during the sunshine hours.

Can a DC surface water pump be powered by solar power?

DC surface solar pumps can be powered by direct solar power. Water can be easily lifted by operating the motor of a DC pump with the electricity generated by the solar panels. The detailed specifications of the DC surface water pump are listed below. 25000 - 60000 Liters per day.

What is a solar drive for water pumps?

A Solar Drive (for water pumps) is a type of electrical converter (essentially solar-powered VSDs) which converts the variable direct current (DC) output of a photovoltaic (PV) solar panel into alternating current (AC) that can be used by a local electrical water pump motor (also still allows for an AC input supply if required).
