

# Solar grid-connected solar panel prices

## Overview

---

Grid-tied solar dominates the market for good reason: With 2025 system costs ranging from \$2.50-\$4.00 per watt installed and federal tax credits of 30% through 2032, grid-tied systems offer the fastest payback periods (6-10 years) and highest returns on investment without requiring expensive battery storage. What is a grid connected solar system?

Components and Prices Explained A solar system connected to the utility grid through a bi-directional net meter is known as a grid-connected PV system. It is known by various names, including a grid-connected energy system, a grid-tied solar system, and an on-grid solar system.

How much does a grid-tied solar system cost?

Grid-tied solar dominates the market for good reason: With 2025 system costs ranging from \$2.50-\$4.00 per watt installed and federal tax credits of 30% through 2032, grid-tied systems offer the fastest payback periods (6-10 years) and highest returns on investment without requiring expensive battery storage.

How much do solar panels cost?

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type, and installer.

What is the relative cost of solar energy?

Another measure of the relative cost of solar energy is its price per kilowatt-hour (kWh). Whereas the price per watt considers the solar system's size, the price per kWh shows the price of the solar system per unit of energy it produces over a given period of time.  $\text{Net cost of the system} / \text{lifetime output} = \text{cost per kilowatt hour}$
