

# Solar inverter and series type

## Overview

What are the different types of solar inverters?

Different types of inverters serve various needs and setups. Let's explore the main types available. String inverters connect a series of solar panels, or a 'string,' to one inverter. The inverter then converts the combined DC power from these panels into AC power. String inverters are popular due to their cost-effectiveness and simplicity.

What are 'string' solar inverters?

This review focuses on common 'string' solar inverters, the most popular type. These inverters use one or more strings (groups) of solar panels connected in series. String solar inverters are the most common type used in the UK, Europe, Australia, and Asia. They are also growing in popularity in the US, where microinverters are extremely popular.

What is a solar inverter?

A solar inverter, or solar panel inverter, is a device that converts the direct current (DC) output of solar panels into alternating current (AC). Our homes and the electrical grid use AC power, so the inverter is essential for integrating solar energy into our daily use.

How to choose a solar inverter?

Check the rated power of the inverter against the total power of the solar panels installed. In on-grid systems, the inverter is usually sized a little below or close to the power of the modules (for example, a system with 5 kW of boards can use a 5 kW or 4.6 kW inverter, as small losses can occur).
