Overview

Why should a PV inverter be paired with a SAPF (active power filter)?

In interactive PV grid topologies, it is common to pair a PV inverter with an SAPF (active power filter) and a voltage and reactive control superstation in order to prevent the costs of the power circuit from rising too high.

Do advanced APF inverters reduce power switches and grid-connected weight?

The purpose of this research is to evaluate advanced APFs for reducing power switches and grid-connected weight, cost, and scale. Several studied APF inverter topologies, including single-phase, three-phase AC-AC, back-to-back, and common parameters, have been considered.

What are active power filters (APFS)?

This technical note provides an overview of Active Power Filters (APFs) designed for harmonic mitigation and specifically targeting three-phase grid-connected inverters. The note begins by introducing various APF topologies and control schemes.

What is an APF filter & how does it work?

This mitigate the total amount of harmonics distortion and enhancing the overall power quality of the grid. Moreover, unlike traditional passive filters, APFs can dynamically adapt to varying load conditions and act as a STATCOM, providing reactive power compensation when needed.
