

Solar inverter reference design

Overview

This document describes a highly efficient reliable inverter concept (HERIC) reference design REF-6KWHERIC and its main features, key data, pin assignments, mechanical dimensions, and electrical interfaces. What is grid connected solar microinverter reference design?

Microchip's Grid-Connected Solar Microinverter Reference Design demonstrates the flexibility and power of SMPS dsPIC® Digital Signal Controllers in Grid-Connected Solar Microinverter systems. This reference design has a maximum output power of 215 Watts and ensures maximum power point tracking for PV panel voltages between 20V to 45V DC.

What is a solar microinverter reference design?

The Solar Microinverter Reference Design implements an interleaved active clamp flyback converter. An inter-leaved topology shares the input/output current which results in lower copper and core losses. Also, the output diode conduction losses are reduced to help improve overall efficiency.

What is a 215W solar microinverter reference design?

System designs can be standardized (hardware and software) to improve reliability and reduce costs. This Application Note presents and discusses Microchip's 215W Solar Microinverter Reference Design in detail. The Solar Microinverter Reference Design is a single stage, grid-connected, solar PV microinverter.

How do I connect a TI solar inverter?

Connect with the output of the solar panel or PV simulator to guarantee that the positive and negative polarity connections are correct. Use the AC output line to connect the output terminal J2 of the TI's micro solar inverter reference design board with the AC Source. The pin definition of J2 is as the following:
