

Solar investment cost per watt inverter

Overview

With prices ranging from \$0.10 to \$0.30 per watt, a typical system for a home with a 3 kW to 10 kW inverter will cost between \$300 and \$3,000. How much does a solar inverter cost?

The overall cost breakdown shows that while necessary, inverters are a relatively small part of the total investment in solar technology. After applying tax credits, the total cost to install a solar system, inverter included, comes to between \$10,600 and \$26,500. In 2023, there was a 15% drop in the price of residential systems.

How much do solar panels cost?

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type, and installer.

How much does a microinverter cost?

While they cost more than string inverters, averaging \$1.15 per watt, they offer the benefit of independent panel optimization. For a 5 kW system, the cost is approximately \$5,750. Microinverters generally come with warranties of around 25 years, which aligns with the expected lifespan of the solar panels themselves.

How much does solar power cost per watt?

Solar power installation costs per watt vary widely, influenced by system type and scale. Residential and commercial installations have distinct price ranges due to differences in energy demands, system sizes, and design complexities. Residential solar installations typically cost between \$2.50 and \$4.00 per watt.
