## Overview

---

Should you add solar panels to a whole home solar generator?

When you add PV solar panels to a whole home solar generator, you can power your home without worrying about gas prices or utility companies. Harvesting the clean, renewable energy of the sun allows your solar generator to be recharged during a blackout and provides sufficient power to keep your home running.

Can a solar generator power a whole house?

Yes, a solar generator can power a whole house. By integrating with your home circuit board using a transfer switch, solar generators can provide uninterrupted power during a blackout. Ensure that the generator's AC output, storage capacity, and electricity generation potential are sufficient for your family's needs.

Which solar generator is best for your home?

The solar generators featured below start with models for small homes and apartments and then increase in power output and storage capacity with options for even the largest home. The EcoFlow DELTA Pro, combined with the Smart Home Panel or a transfer switch, is the perfect whole-house solar generator starter kit.

How does a solar & storage hybrid generator work?

In solar + storage hybrid generators, the DC power from solar panels is routed to the MPPT charge controller first and then stored in solar battery packs for use when needed. The DC power stored in home backup batteries is converted to AC electricity by an inverter for use in your home.
