Overview

How does home solar power work?

Here's a step-by-step overview of how home solar power works: Excess solar energy is stored in batteries or pushed onto the grid to power local systems (like your neighbor's house!) Now that we've covered the basics, let's break down how solar panels work in more detail. How does solar power work?

The photovoltaic effect explained.

How do solar panels work?

Solar panels work by converting sunlight into electricity through a process called the photovoltaic effect. This process produces direct current (DC) electricity, which then needs to be converted to alternating current (AC) electricity for your home to use.

How does a solar system work?

Most home solar systems are "grid-tied" meaning that the solar system, home electrical system, and local utility grid are all interconnected, typically through the main electrical service panel. Connecting these systems means you can power your home with solar electricity during the day and grid electricity at night.

What is a complete home solar power system?

A complete home solar power system includes more than just solar panels. Here are the essential parts: Solar Panels - Capture sunlight and produce DC electricity. Inverter - Converts DC into AC electricity. Mounting System - Secures the panels to your roof or ground. Batteries (optional) - Store extra electricity for later use.
