

# **Solar panels and batteries matching**

## Overview

---

### How to match solar panels with batteries?

If you need 30 kWh daily and want 2 days of autonomy, then you need a battery with a minimum capacity of 60 kWh. Choose battery types that match your system's voltage and charging requirements to ensure compatibility. By following these steps, you can effectively match solar panels with batteries to optimize your energy system.

### Are solar panels compatible with battery storage?

The compatibility between solar panels and battery storage depends on various factors, including your solar panel specifications, battery type, inverter technology, and system architecture. Understanding these factors is essential for creating an efficient and reliable solar-plus-storage system that meets your energy needs.

### Should you combine solar panels with battery storage?

As more homeowners embrace energy independence, combining solar panels with battery storage has become more popular. Battery storage allows you to capture excess solar energy during sunny periods and use it when your panels aren't producing, like at night or during power outages.

### Do solar panels and battery systems work together?

Battery storage allows you to capture excess solar energy during sunny periods and use it when your panels aren't producing, like at night or during power outages. But not all solar panels and battery systems work seamlessly together.
