Solar plant energy storage combined frequency regulation project

Overview

Do energy storage systems participate in frequency regulation?

Current research on energy storage control strategies primarily focuses on whether energy storage systems participate in frequency regulation independently or in coordination with wind farms and photovoltaic power plants .

How a hybrid energy storage system can support frequency regulation?

The hybrid energy storage system combined with coal fired thermal power plant in order to support frequency regulation project integrates the advantages of “fast charging and discharging” of flywheel battery and “robustness” of lithium battery, which not only expands the total system capacity, but also improves the battery durability.

Can photovoltaic power stations be controlled by a joint frequency modulation optimization?

The result of this project can also be extended and applied to the primary frequency control of grid-connected photovoltaic power stations in the power grid, and even further applied to the joint frequency modulation optimization control of the multi-energy complementary interconnected power system of the power grid.

What is coupling coordinated frequency regulation strategy of thermal power unit-flywheel energy storage system?

The coupling coordinated frequency regulation control strategy of thermal power unit-flywheel energy storage system is designed to give full play to the advantages of flywheel energy storage system, improve the frequency regulation effect and effectively slow down the action of thermal power unit.
