

# Solar power generation system 3000w

## Overview

---

What is a 30kW Solar System?

A 30kW solar system is a photovoltaic (PV) system that generates 120 watts of power. This type of system is suitable for medium-sized homes or business buildings with an average roof size between 180 sq. meters. A 30kW solar system is a large-scale photovoltaic (PV) power plant that uses 30 kilowatts of PV modules to generate electricity.

How many watts can a 30kW Solar System produce?

A 30kW solar system is a combination of two modules, which means that it can produce up to 120 Watts of electricity per day which means that it can able to produce 36,00 units per month. The solar system requires 75 solar panels to produce 400 watts of energy.

How many 330W solar panels are needed for a 30kW system?

For a 30kW solar system, you would need 120 such panels to achieve the desired capacity. Dimension of a 330w solar panel is 1.675m X 1m, therefore it will occupy around 1.675 sqm of space. Depending on roof type, roof dimension and capacity of panels, it is always advisable to calculate an extra bit of space.

What is the average daily power generation of a 30kW solar system?

A 30kW solar power system generates an average of 120kW in a day. Considering this average daily power generation and assuming that you pay 25c tariff to your electricity company, a 30kW Solar Power System can help you to save \$30 per day if you consume the entire power generated by the solar system.
