

# **Solar power station for home in Poland**

## Overview

---

What is photovoltaics & how does it work in Poland?

Photovoltaics, i.e. the use of solar energy to produce electricity, is becoming more and more popular in Poland. However, before we explore its current state and prospects, it is worth taking a look at the history of the development of this technology in the country.

Will solar power be a good investment in Poland in 2025?

Thanks to additional government subsidies for small private PV systems and high electricity prices of over 30 eurocents per kilowatt hour for companies, investments in own electricity generation in both areas will become attractive in 2025. In September 2024 alone, PV systems with a total power of 363.53 megawatts were installed in Poland.

Why should you invest in photovoltaic panels in Poland?

Photovoltaics, like heat pumps, have become one of the fastest-growing energy sectors in Poland. Investing in photovoltaic panels is not only a way to save money but also to increase independence from rising electricity prices. By generating electricity from renewable energy sources, you can protect the environment while reducing your bills.

Will Poland be able to generate electricity in 2025?

Poland will reach an installed photovoltaic capacity of 20 gigawatts by the end of this year. Thanks to additional government subsidies for small private PV systems and high electricity prices of over 30 eurocents per kilowatt hour for companies, investments in own electricity generation in both areas will become attractive in 2025.
