

# Specifications and prices of solar modules

## Overview

---

How much does a solar panel installation cost?

The best way to evaluate the price of a solar panel installation is in dollars per watt (\$/W). Similar to comparing dollars per square foot when shopping for a home, \$/W helps standardize the cost of solar by showing the cost of solar on a per watt basis. Currently, the average price of a solar panel system install in the U.S. is \$2.91/W.

How efficient are solar panels?

Most solar panels today have efficiencies ranging from 15% to 20%, but some manufacturers sell panels that exceed 20% efficiency ratings. The cost of a solar panel installation varies by location, property type, and, of course, the panels used for the installation.

How many solar panels do I Need?

The average home needs between 20 and 25 solar panels to fully offset their utility bills with renewable energy. This number depends on a variety of factors including location, climate, panel efficiency, and individual panel specifications.

What is PV system cost model (pvscm)?

In the PV System Cost Model (PVSCM), the owner's overnight capital expense (cash cost) for an installed PV system is divided into eight categories, which are the same for the utility-scale, commercial, and residential PV market segments: Module - The cost to the installer of photovoltaic modules, as delivered.
