

# **Standard practice for outdoor battery grounding wire of base station**

## Overview

---

Why do electrical systems need to be grounded?

The basic reasons for grounding or not grounding the electrical system and the various types of system grounding, as well as the practices commonly used to ground electrical systems are discussed. Purpose: Grounding of an electrical system is a decision that must be faced by engineers charged with planning or modifying electrical distribution.

What is electrical system grounding?

Grounding of an electrical system is a decision that must be faced by engineers charged with planning or modifying electrical distribution. Grounding in some form is generally recommended, although there are certain exceptions. Several methods and criteria exist for system grounding; each has its own purpose.

Do you need to ground an electrical system?

Grounding of an electrical system is a decision that must be faced sometime by most engineers charged with planning or modifying electrical distribution. Grounding in some form is generally recommended, although there are certain exceptions. Several methods and criteria exist for system grounding; each has its own purpose.

What are the rules for system grounding?

System grounding connections downstream of the disconnecting device have the same rules as for service-supplied circuits. The point of grounding for systems shall be the neutral or common conductor where one exists; otherwise the point shall be a phase conductor.

### 9 Recommended Practices for Grounding

Recommended Techniques For Grounding Equipment Grounding Conductors Isolated Grounding System Isolated-Ground Wiring and Ground-Fault Current Merits of Isolated-Ground Wiring Methods Demerits of Insulated Ground Wiring Methods Branch-Circuit Grounding Ground Resistance Ground Rods Ground Ring Measure the resistance of the grounding electrode system to ground. Take reasonable measures to ensure that the resistance to ground is 25 ohms or less for typical loads. In many industrial cases, particularly where electronic loads are present, there are requirements which need values as low as 5 ohms or less many times as low as 1 ohm. For these s See more on electrical-engineering-portal rrade [PDF] IEEE Std 142-2007 (Revision of IEEE Std 142-1991) IEEE ...
