

The first batch of energy storage projects in the United States

Overview

Which energy storage technologies are used in the United States?

Batteries and pumped hydro are the main storage technologies in use in the U.S., according to the number of storage projects in the country in 2023. Discover all statistics and data on Energy storage in the U.S. now on [statista.com!](https://www.statista.com)

How much energy is stored in the United States?

According to Wood Mackenzie, there is 83 GWh of installed energy storage capacity in the United States, including nearly 500,000 distributed storage installations. Current forecasts show that U.S. storage capacity is expected to reach 450 GWh by 2030, falling short of the capacity required to support our nation's energy needs.

How many battery storage projects are coming to Texas?

Developers expect to bring more than 300 utility-scale battery storage projects on line in the United States by 2025, and around 50% of the planned capacity installations will be in Texas. The five largest new U.S. battery storage projects that are scheduled to be deployed in California and Texas in 2024 or 2025 are:

Can energy storage improve the performance of the electricity grid?

The energy storage sector in the United States has been thriving in the past years, with several applications to improve the performance of the electricity grid, from frequency regulation and load management to system peak shaving and storing excess renewable energy generation.
