What is an uninterruptible power supply (UPS)?

An uninterruptible power supply (UPS) is a system that provides back-up power in the event of a power failure due to a natural disaster such as a typhoon or lightning strike, or an unexpected accident. Large-scale computers such as cloud systems have become important parts of our infrastructure that support our daily lives and businesses.

What is a portable ups?

A portable Uninterruptible Power Supply (UPS) is used in on-site applications across industries such as mining, military, and industrial sectors. It is designed to maintain a steady power supply even if the supply from the utility lines surges or fluctuates. This protects all devices connected to the UPS from unstable power supply.

What is the history of ups?

The history of UPS systems is rooted in the mid-20th century when they were essentially electro-mechanical devices. These early models primarily utilized motors and generators. When the main power source failed, the mechanical energy stored in the motor's flywheel was quickly converted to electrical energy to keep critical systems running. 2.
