

Thin-film solar panel glass

Overview

What is a thin film solar panel?

The fabrication of the thin film solar panel is very different from mono- and polycrystalline solar panels. The thin layers of silicon is deposited directly on thin layers of plastic sheet or glass sheets. APPLICATIONS: Thin film solar panels are used in mostly low power applications from powering calculators, watches, toys to boats and rooftops.

Who makes thin film solar panels?

Hanergy Thin Film Power Group, based in China, is a leading innovator in flexible thin film solar panels. The company specializes in copper indium gallium selenide (CIGS) thin film technology, which offers superior flexibility and adaptability compared to traditional rigid solar panels.

What is a CIGS thin film solar panel?

The company specializes in copper indium gallium selenide (CIGS) thin film technology, which offers superior flexibility and adaptability compared to traditional rigid solar panels. Hanergy's flexible thin film solar panels are lightweight, durable, and customizable, making them suitable for a wide range of applications.

What are amorphous silicon thin film solar panels?

Amorphous silicon (a-Si) thin film solar panels are one of the most established types of thin film technology. These panels are created by depositing a non-crystalline silicon layer onto a substrate, typically glass. The non-crystalline structure allows for flexibility in manufacturing and enables the panels to be lightweight.
